

Partner Spotlight: Etion Create

SUNDANCE

Saab selects Etion Create's VF370 for IDAS-310 system

Saab has selected Etion Create's VF370 computing module for its IDAS-310 electronic warfare suite, used in aircraft across 15+ countries. Etion Create is our South African embedded tech partner, and we're proud to see their work adopted at this level. This decision reinforces the VF370's reliability and capability in demanding, mission-critical defence environments.

Saab needed a compact, high-performance processor with a long deployment lifespan. Etion Create's VF370, a rugged 3U OpenVPX board built on Intel Atom and Cyclone V FPGA technology, delivered the performance, efficiency, and flexibility they needed. Now rated at Technology Readiness Level 9 – the highest maturity level – the VF370 is attracting interest from other defence OEMs.

As Etion Create's UK partner, we're proud to support their technology and help grow their presence in the region.
