SMT-FMC311 In Stock Now!

The SMT-FMC311 FMC-LPC card can be plugged into an FPGA-based system to form a DAQ solution. It has the low-pin count connector at one end of the PCB card and the analogue signal connectors on the opposite end, eliminating the requirement for any internal cables from a module to an external case. The prime market for FMCs is ruggedized applications.

Click the link below for a detailed list of its features and applications.

"I am extremely satisfied with the service I received from Sundance. I was in desperate need of repairing these cards as there were no replacement parts available in the market. Sundance went above and beyond to ensure that my needs were met and that my electronic cards were fully functional again. I'm sure I will recommend your services and, of course, your products to anyone who needs this kind of service, especially those who are struggling to find replacement parts in this market." - Armando Escorcia
