Why Edge AI Leads in Realtime Decisions

Artificial intelligence (AI) is revolutionizing industries, and its true potential shines at the network's "edge," where data originates. Unlike cloud-based AI, edge AI processes data locally, reducing latency and bandwidth issues. This enables real-time decision-making crucial for applications like real-time video analytics, autonomous vehicles, industrial IoT, healthcare, and smart cities.

Discover the advantages and applications of edge AI, and learn how Sundance's innovative hardware supports these technologies.

"I am extremely satisfied with the service I received from Sundance. I was in desperate need of repairing these cards as there were no replacement parts available in the market. Sundance went above and beyond to ensure that my needs were met and that my electronic cards were fully functional again. I'm sure I will recommend your services and, of course, your products to anyone who needs this kind of service, especially those who are struggling to find replacement parts in this market." - Armando Escorcia
